

original planting we have now reduced the number which have unquestioned merit to 50, and these are growing at Edgewood. They vary at present in height from 2 to 12 feet. We anticipate that some of them will prove to be valuable hedge plants, partaking enough of the characteristics of *ovalifolium* to give these plants desirable hedge qualities and at the same time prove more hardy owing to the infusion of *obtusifolium* blood. They have not yet been subjected to temperature exposures which have killed *ovalifolium* entirely to the ground, conditions which do occur occasionally in this vicinity, so their relative hardiness has not been absolutely determined as yet." (*Elm City Nursery Co.*)

42223 to 42267. RIBES spp. Grossulariaceæ.

From Lethbridge, Alberta, Canada. Cuttings presented by Mr. W. H. Fairfield, superintendent, Experimental Station for Southern Alberta, Received March 29, 1916.

Requested by this office for the studies of the Office of Horticultural and Pomological Investigations.

42268. FERONIA LIMONIA (L.) Swingle. Rutaceæ. Wood-apple. (*Feronia elephantum* Correa.)

From Poona, India. Presented by the superintendent, Empress Botanical Gardens. Received March 31, 1916.

A spiny, deciduous tree, native of India, Ceylon, and Indo-China, with pinnate, three to seven foliate leaves and nearly globose fruits, 2½ to 3 inches in diameter, having a hard, woody rind, filled with pinkish edible pulp in which numerous woolly seeds are immersed. The pulp, which is acid, is used for
